Check out the DHeLiDA outcomes!

Dear DHeLiDA followers,

Our project is coming to its end. Please find below a brief overview of the project's results, as well as some information regarding final project activities. DHeLiDA project has developed tools to enable citizens to better manage their health and illness online, improve prevention, enable more accurate diagnosis and treatment, and facilitate communication between patients and health care professionals.

The following main outputs have been produced:

1. Crowdsourcing Platform on Digital Health Literacy <https://dhelida-platform.eu>

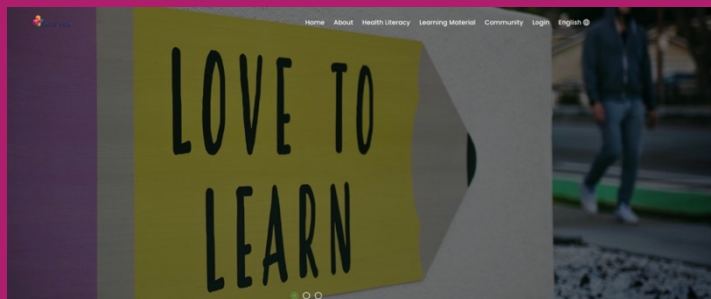

The platform is a collaborative online environment where experts, educators and adult users interact to share and create collective awareness on digital health. The platform also serves as a multilingual online repository and annotated catalogue of OERs on digital health.

2. CompHealth Foundation Framework

The DigComp Health Foundation Framework is part of the DigComp Framework, the European reference framework for digital competences for citizens. It describes the basic digital competences needed to use health technologies and services. The DigComp Health Foundation Framework is an important tool for the development and improvement of digital competences in healthcare. It can be used to develop teaching and learning materials tailored to the needs of patients and healthcare providers.

3. DHeLiDA Training and Sustainability Toolkit

The toolkit is a comprehensive resource consisting of 11 modules focused on digital health literacy. It provides trainers and participants with a valuable collection of information, materials and activities to enhance their understanding and skills in digital health. Each module of the toolkit addresses specific aspects of digital health literacy and provides detailed information and practical guidance.

FINAL STEPS – TRAININGS AND MULTIPLIER EVENTS

During the last couple of months of the project, DHeLiDA partners organized pilot training pathways with adults with fewer opportunities to test the created materials.

In all partner countries multiplier events were held to present the project products as well as collect feedback on the European Health Netiquette.

During the evaluation sessions the participants expressed their enthusiasm about the project products and appreciated very much the methods used for improving digital health literacy among vulnerable target groups.

For more information on the project, please visit www.dhelida.eu or contact the project partner in your country, contact data are available via the website.
